

Sensorbee Vibration Sensor

The SB3641 is a durable triaxial vibration sensor for monitoring construction, blasting, and traffic vibrations. It connects seamlessly with the Sensorbee Pro2 base via Modbus RTU and is built for long-term use in harsh environments with its IP67 weatherproof housing. The SB3641 provides real-time data on Peak Particle Velocity (PPV), Peak Component Particle Velocity (PCPV), and frequency spectrum, offering precise insights for infrastructure and environmental monitoring.

SB3641 - Sensorbee Vibration sensor

Velocity range:

± 50 mm/s

Operating Temperature:

-30 to +60 °C

Power:

5 to 24VDC

RMS noise:

0.05 mm/s

Temperature Sensor:

-20 to 50 °C: ± 0.1 °C

Dimensions:

100 x 100 x 30 mm

Interface:

Sensorbee extension port (M8)

Operating Humidity:

0 to 99 %RH

Weight:

350 gram

Waterproof Rating:

IP67

Regulatory Compliance:

CE

Power:

10 mW

Bandwidth:

1 to 100 Hz. Signals are sampled at 4096 Hz.

Housing:

Aluminium with 5 mm plate.
Dimensions: 100 x 100 x 30 mm.

Cable length:

2.5m

Connectivity:

Compatible with Sensorbee Air quality units, using the M8 extension port (Modbus RTU)

Output Data:

PPV,
PCPV (X, Y, Z),
Peak Frequency (X, Y, Z),
PPV FFT spectrum peak amplitude,
Temperature

Data Visualization:

The Sensorbee Cloud Platform displays sensor data in real-time and historical views, offering detailed visualizations such as PPV graphs, PCPV/frequency plots, and FFT analysis.
